Reports Introduction

About the Reports Module

The Ostara system allows the Client to output all Core Data in its entirety, providing the ability to manipulate the data as required. Ostara Systems Limited does not believe that Clients should have to pay to extract their own data, and promotes total transparency.

Each module within the Ostara system has a number of predefined reports which should meet 95% of all Clients' requirements. Reports can be filtered, have date ranges applied and are interactive.

All reports are available within the application without the User having to gain access to a separate reporting system.

This is what the Reports module looks like:

Viewing Reports
Performance Metric Exclusions
Email Reports
