

Profile Administration Levels

Wed, Jan 17, 2024 Profiles

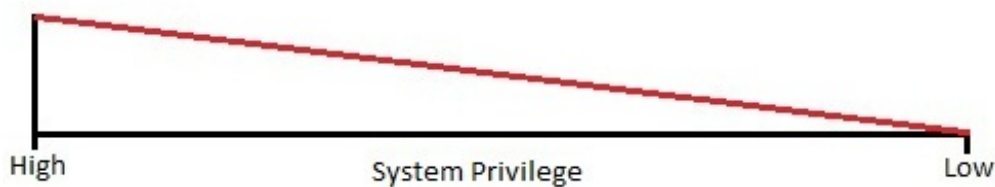

Profiles have a level value which is known as an Administration Level. The Administration Level on a Profile determines which functions/permissions that Profile (and in turn the Users) will have access. This is determined by giving a Profile a value from between 1 and 10. If a Profile has a level of 10, it can only access the permissions that are at Administration Level 10 but if a Profile has a level of 1, it can access the permissions through Administration Levels 1 - 10.

In short: the lower the Administration Level, the higher the privilege the User has.
See the example table below for more information:

The higher the number:

The lower the privileges:
