Questions on Jobs

Fri, Jan 19, 2024 Create Job Tab

During the job creation, start job and stop job processes, depending on the configuration setup by the System Admin, one or more Questions could be displayed. The Questions tab requires the User to answer specific questions determined by the System Admin.

After providing the contact information or performing the duplicate and Building Event checks, the Questions tab is displayed (if a Request For Information (RFI) is triggered). All that is required here is for the User to fill out the questions. If any of the questions have scoring enabled, different text will be displayed next to each question determining whether it was a "Pass" (in green text) or a "Fail" (in red text).

Once all questions have been answered, click "Next" to continue with the normal process. The summary will also change the Questions status from "Pending" to "Completed".
